

Networking | Security | Consulting

Executive Summary

About XAAS Infotech

XAAS is a complete technology solutions provider in IT Networking, Information Security, and consulting services domain. With overall management's cumulative experience of over 75 man years in the Networking and Security space, is best positioned to offer innovative solutions and services by leveraging best of breed global products and technology solutions through strategic alliances and partnerships with industry leaders.

By combining broad range of strategic solutions, services and expertise, we help organisations to address ever increasing challenges of designing, implementation, network management and security so that they can focus on their core areas of business.

Our business goal is to develop creative, cost-effective solutions, from the design phase through installation, and provide maintenance and support thereafter. We take a team approach with our customers to help them identify possible solutions, evaluate those for effectiveness and appropriateness to the problem, and then implement the most favourable alternatives. Our decision to represent multiple vendors increases our alternatives for developing the best of breed solutions for our customers. Furthermore, management and staff at XAAS Infotech are committed to excellence in customer service and satisfaction.

Our People

We recognize that our employees are important assets & core strength of our organization and are committed to retain, inspire & nurture the best & brightest individuals by offering an open, healthy and rewarding work environment. Each individual comes with different background, expertise, experience, goals, dreams, and aspirations; we have set out to create a culture and a climate of respect that gives employees the personal freedom to achieve their individual goals while simultaneously pursuing company objectives.

Some of our Customers

Xaas Infotech has several enterprise and SMB customer installations in different industry segments across India. These include customers like **Advice America, Wipro, Robert Bosch, Tata Hitachi, Coca-Cola, Birla Sun Life, 24by7Customer, TESCO, Sutherland Global, Muthoot Finance, ING Vysya Bank (Kotak Bank), JSW, Bateman, July Systems, TVS, Larsen & Toubro, MRPL, etc.**

Information & Communication Technology (ICT)

Xaas is a System Integrator in the ICT Infrastructure space. Xaas has seen tremendous growth since 2009 and recognized as a key player in the Projects. ICT infrastructure business offers solutions for data, voice, Video and wireless communications within campuses and for long haul OFC networks.

Xaas has strengthened its focus on Infrastructure Networking which has enabled the group to offer a complete integrated comprehensive solution on voice/data/video/security and wireless across the country. Xaas offers end-to-end ICT solutions and services to large organizations, both for their captive & project requirements. It offers a single window approach towards turnkey solutions in Broadband deployment, Enterprise LAN/WAN networks design, supplies, installation and maintenance of the networks. Support services offered include Site Survey, SRS/ Design, Sourcing/Vendor Liaison & Management, Manpower Sourcing, Integration/Implementation, and Maintenance Support (eg. On-site break-fix support with varying SLAs, Resident Engineers, AMC Management, Vendor Co-ordination for spares, Logistics and documentation co-ordination etc)

Our ICT Infrastructure Projects for enterprises include Design, Supply and implementation of the networks, connecting various buildings in a campus for multiple IP based services. This includes:

- Passive Network – copper/fiber optic cabling
- Active Network - Switching & Routing
- Wireless LAN within Campus
- Network Management

Network Infrastructure for HTMS /TMS for major Roadways projects which include design, supply, installation, integration and commissioning of complete Optic fiber based Gigabit Ethernet Backbone Communication System for Toll Collection & Traffic Control Equipment. This includes

- Passive infrastructure for HTMS & TMS devices
- Active Network – Industrial grade Switches and devices
- VoIP soft switch and Voice loggers
- Digital Video Management Systems
- Security & Surveillance
- Infrastructure for Variable Messaging System
- Emergency Call Box
- Power Management System
- Field Equipment Cabinet
- Central Control Server to host ATMS and its software

INFORMATION SECURITY (IS)

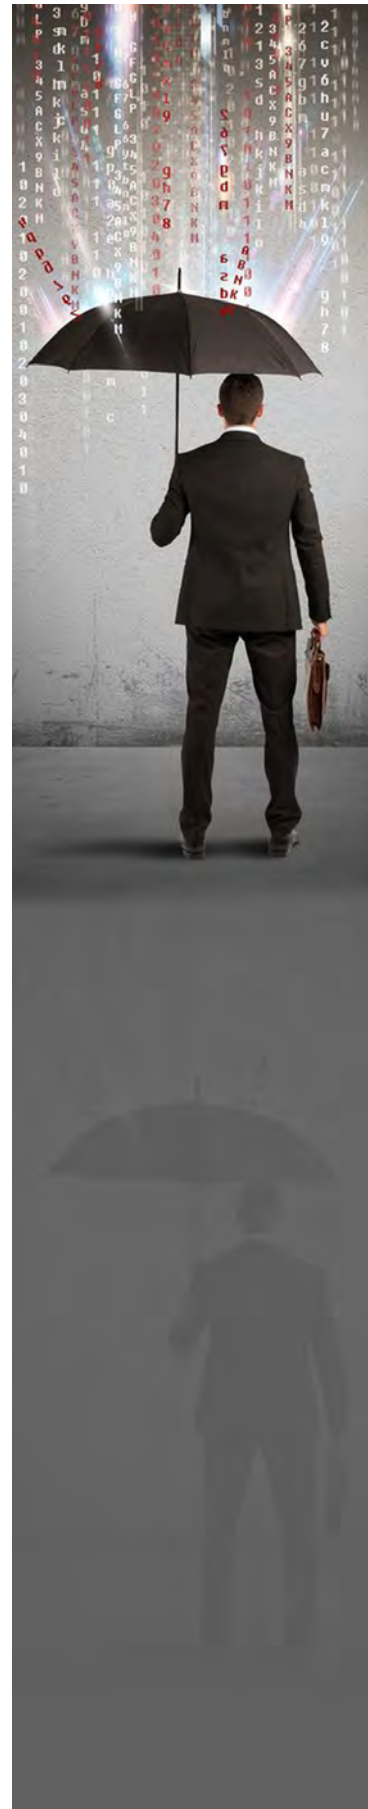

Reputation and integrity of trusted organizations are at risk as the magnitude (quantity) and the speed at which information security threats are increasing. The boundaries between internal and external IT environments blur as customers, suppliers, and remote users connect to the network. Although cyberspace offers opportunities for leading organisations, this environment is uncertain and potentially dangerous. Internet has become a haven for hackers and cybercriminals to hone their skills and in response governments are bringing in new legislations and regulations to address public concerns and prevent frauds. This puts pressure on organizations to adapt themselves and to be ready for responding appropriately. Better informed and prepared organizations are likely to go a long way in securing their future.

Xaas Infotech can help you plan, design, implement, and support a comprehensive enterprise security solution based on best-of-breed technologies, to ensure the integrity of information and the availability of resources on corporate networks. With a team that has got experience in the Security industry, we bring in the depth and breadth of expertise needed to address the complex security issues in today's computing environments.

We take the industry's leading security products and combine them with our own widely recognized engineering services to create security solutions you can depend on - for today's threats and the emerging ones of tomorrow. Our team is armed with the expertise to understand the threats and design implement and monitor security solutions to guard your organization against security threats without compromising on the information access needs of employees, partners and customers.

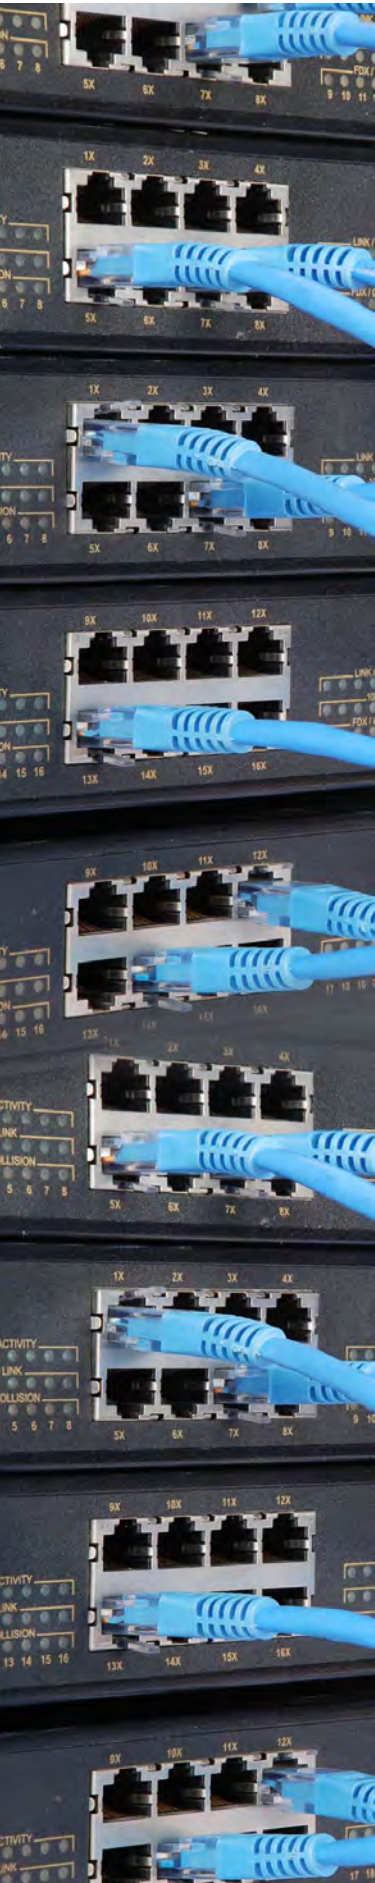

We deliver solutions to address a wide range of enterprise security concerns, including:

- Next Generation Firewall , SSL VPN, IPS, 2 factor authentication, Web security
- End Point security, DLP, Device control, Data encryption and Mobile device management.
- NAC, Patch management, Managed file transfer, Virtualization security
- SIEM, IDAM, GRC and Vulnerability management.
- Cloud BCP – We offer backup and cloud based BCP/ DR solutions

PROFESSIONAL SUPPORT SERVICES (PSS)

XaaS infotech has a PSS offering through which we can deliver implementation, deployment, monitoring & support for networking, security and storage solutions. We offer trainings or workshops on security and cloud. PSS also consists of audit and compliance where we render services of VA, PT, security audits, and compliance audits.

ICT Services

Implementation:

- Pre installation Audit Hardware preparation Interface configuration
- Integration as per design guidelines Diagnostics
- Functionality verification and Installation certification

Network Administration

- System Configuration
- Troubleshooting & Network Auditing
- Application Integration
- Platform Technology Training

Network Monitoring & Performance Management

- Network Layout qualification
- Domain / Sub - net study
- Segmentation and traffic flow analysis
- Performance Metrics definition
- Bottleneck determination & Throughput analysis
- Protocol Analysis
- Bottleneck elimination

Network Design

- Site Analysis Bandwidth Estimation
- LAN/WAN Access method determination
- Wireless Network Access
- Network Architecture Design

Network Design

Implement, deploy and configure controller based or controller less solutions and tune them for optimal performance in your environment even with a high concentration of devices.

INFORMATION SECURITY SERVICES

We implement or deploy security and networking products/solutions.

Firewall – Implement, enable required security features, initial configuration, rules & VPN.

IPS - Implement the solution in monitoring mode and subsequently enforce policies based on logs monitored and deciphered.

APT- Implement and configure APT solutions (anti malware) for the web. Articulate the reports so you can accordingly take appropriate remediation steps.

SIEM- Implement or deploy the SIEM solution with customization. We offer an administrative level training after the implementation.

IDAM- Implement, deploy configure Data access governance and identity life cycle

End point- Implement; configure advanced end point policies to protect against malware.

BYOD/NAC -Implement and configure policies for optimal functioning of the solution.

GRC- Consult, implement or deploy the GRC solution and build or audit the required workflow processes.

- Enterprise Security Architecture design
- Business Continuity & Disaster Recovery Plan
- Network Architecture Review
- Information & Network Security Audits
- Vulnerability Assessments / Penetration Testing
- ISO27001 implementation Consulting
- ISO20000 (IT Service Management) implementation consulting
- SOX / HIPAA / PCI Compliance advisory

DLP- Consult, implement, monitor enforce and protect for the Web, mail and end point channels.

Services provided under DLP:

- Data Security Services
- Data Loss Risk Assessment
- Data Classification Strategy
- DLP deployment & Integration
- Monitoring and support

Monitoring support

We provide monitoring support for network security solutions that have been already implemented and deployed. That will help you to efficiently administer, tweak the solution to recognize the significance of it.

Resource augmentation

We provide resources for bridging skill gaps & conduct complete implementation, monitor network security solutions in the areas of Next Generation Firewall, IPS, SIEM, Web Security and Email Security. We also provide resources in the networking field

Consulting (Audit and Compliance)

We conduct network security assessments & audits to manage risks and provide reports to help remediate. We can also conduct compliance assessments like the PCI-DSS.

Training

We conduct trainings or workshops on CISSP, CEH, ISO27001, Certificate of Cloud Security Knowledge, Exin Cloud Computing, Web Application Penetration Testing and Secure Software Lifecycle.

Cloud services

We offer migration services to the public cloud.

The cloud can support front, middle- and back-office functions everything from business applications and client relationship management systems to data management solutions and even accounting systems. Cloud computing has management solutions and accounting systems. Cloud computing has a number of benefits most notably a low infrastructure investment, increased flexibility and reduced maintenance.
